

Thoughts about the Coding Exercises

The box model exercises were easy because we had already worked with those codes in class. However, for the positioning exercises, I didn't know how to place an image behind the text, so I had to google it. I learned that you have to use the syntax `z-index: -1`. I think that this function is going to be useful for my project because I want to have some text on top of images. I found the overflow exercises a little bit difficult because I didn't know how to put a scrollbar in a `<div>` and I didn't know how to make parts of the text not visible. The new syntax I learned was `overflow: hidden` (to hide overflowing text), `overflow: scroll` (to add a vertical scrollbar) and `overflow-x: scroll` (to add a horizontal scrollbar)
